New Features

Version 1.36.02

V1.36.02-001

Added new memory allocation functions:

Mem_PoolBlkGetUsedAtIx() gets a used memory block from memory pool, by index

Mem PoolBlkIxGet() gets index of a memory block in a memory pool

Version 1.36.01

V1.36.01-001

Added new memory allocation functions:

Mem_PoolBlkGetNbrAvail() gets memory pool's available number of blocks to allocate

See also 'Changes V1.36.01-001'.

V1.36.01-002

Added new bit macros:

DEF_BIT_SET_xx() set specified bit(s) in a value of specified bit size DEF_BIT_CLR_xx() clear specified bit(s) in a value of specified bit size

See also 'New Features V1.35.00-003'.

Version 1.36.00

V1.36.00-001

Added new memory allocation functions:

Mem_HeapGetSizeRem() gets remaining heap memory pool size available to allocate

Mem_PoolGetSizeRem() gets remaining memory pool size available to allocate

See also 'New Features V1.36.01-001' & 'Changes V1.36.01-001'.

V1.36.00-002

Added new value macro:

DEF_GET_U_MAX_VAL() gets maximum unsigned value that can be represented in an unsigned integer variable of the same data type size as an object

Version 1.35.00

V1.35.00-001

Added DEF NULL to assign or validate NULL pointer values.

V1.35.00-002

Added new octet defines:

DEF_OCTET_TO_BIT_NBR_BITS
DEF_OCTET_TO_BIT_SHIFT

DEF OCTET TO BIT MASK

number of bits to encode/decode octets-to-bits

mask value to encode/decode octets-to-bits

V1.35.00-003

Added new bit macros:

DEF_BITXX()
DEF_BIT_MASK_XX()
DEF_BIT_FIELD_XX()

create a bit mask of specified bit size with specified bit set

shift a bit mask of specified bit size

create and shift a contiguous bit field of specified bit size

See also 'New Features V1.36.01-002'.

V1.35.00-004

Added new memory data value macros:

MEM_BIG_TO_LITTLE_??()
MEM_LITTLE_TO_BIG_??()

convert big- endian data values to little-endian data values convert little-endian data values to big- endian data values

MEM_???_TO_HOST_??()
MEM HOST TO ??? ??()

convert big-/little-endian data values to host-endian data values convert host-endian data values to big-/little-endian data values

MEM_VAL_COPY_GET_INTU_???()

copy and decode data values from any memory address to any

other memory address for any sized data values

MEM VAL COPY SET INTU ???()

copy and encode data values from any memory address to any

other memory address for any sized data values

MEM VAL COPY()

copy data values from any memory address to any other

memory address for any sized data values

See also 'New Features V1.21-001'.

V1.35.00-005

Added new value validation macros:

DEF_CHK_VAL_MIN()
DEF CHK VAL MAX()

validates a value as greater than or equal to a specified minimum value validates a value as less than or equal to a specified maximum value

DEF_CHK_VAL()

validates a value as greater than or equal to a specified minimum value

and less than or equal to a specified maximum value

N/A

Version 1.33

V1.33-001

Added LIB_STR_CFG_FP_MAX_NBR_DIG_SIG to (optionally) configure the maximum number of floating-point number significant digits to format/parse. See also 'Improvements V1.33-003'.

Version 1.32

N/A

Version 1.31

V1.31-001

Added new Boolean-related defines:

DEF_INVALID
DEF_VALID

V1.31-002

Added new string functions:

Str_Char_Last_N() searches a string for a character starting from the end of the

string limited to a maximum number of characters

Str_Str_N() searches a string for a sub-string limited to a maximum number

of characters

See also 'New Features V1.20-001, V1.26-003, & V1.30-004'.

Version 1.30

V1.30-001

Added new template configuration file lib cfg.h.

V1.30-002

Added LIB_MEM_CFG_OPTIMIZE_ASM_EN to enable/disable assembly-optimized memory functions. See also 'Changes V1.30-001'.

V1.30-003

Added new math module functions:

Math Init() initializes mathematical library

Math Rand() generates a (pseudo-) random number

Math RandSeed() generates the next (pseudo-) random number after a specified

seed value

Math_RandSetSeed() sets the next (pseudo-) random number seed value

V1.30-004

Added new string functions:

Str_Len_N()

calculates a string's length limited to a maximum number of characters

See also 'New Features V1.20-001, V1.26-003, & V1.31-001'.

Version 1.29

V1.29-001

Added new time-related defines:

```
DEF_TIME_NBR_DAY_PER_WK
DEF_TIME_NBR_DAY_PER_YR
DEF_TIME_NBR_DAY_PER_YR_LEAP

DEF_TIME_NBR_HR_PER_WK
DEF_TIME_NBR_HR_PER_YR_LEAP

DEF_TIME_NBR_HR_PER_YR_LEAP

DEF_TIME_NBR_MIN_PER_WK
DEF_TIME_NBR_MIN_PER_YR
DEF_TIME_NBR_MIN_PER_YR_LEAP

DEF_TIME_NBR_MIN_PER_YR_LEAP

DEF_TIME_NBR_SEC_PER_WK
DEF_TIME_NBR_SEC_PER_WK
DEF_TIME_NBR_SEC_PER_YR
DEF_TIME_NBR_SEC_PER_YR
DEF_TIME_NBR_SEC_PER_YR
DEF_TIME_NBR_SEC_PER_YR
DEF_TIME_NBR_SEC_PER_YR
DEF_TIME_NBR_SEC_PER_YR
DEF_TIME_NBR_SEC_PER_YR LEAP
```

Version 1.28

V1.28-001

Added LIB_MEM_CFG_HEAP_BASE_ADDR to (optionally) specify the heap memory base address.

Version 1.27

V1.27-001

Added new memory allocation function:

Mem_PoolClr() clear a memory pool

See also 'Changes V1.26-001' & 'New Features V1.25-001'.

V1.26-001

Added new memory allocation function:

Mem_HeapAlloc() get memory from the heap

See also 'Changes V1.26-001' & 'New Features V1.25-001 & V1.36.00-001'.

V1.26-002

Added new ASCII module functions and macros:

ASCII_IsDigOct() indicates whether a character is an octal digit
ASCII_IS_DIG_OCT()

See also 'New Features V1.25-002'.

V1.26-003

Added new string compare functions:

Str CmpIgnoreCase() compares two strings, ignoring case

Str_CmpIgnoreCase_N() compares two strings, ignoring case, up to a maximum number

of characters

See also 'New Features V1.20-001, V1.30-004, & V1.31-001'.

V1.26-004a

Added new string format functions:

Str_FmtNbr_Int32U() formats an unsigned number into a string
Str FmtNbr Int32S() formats a signed number into a string

V1.26-004b

Added new string parse functions:

Str_ParseNbr_Int32U() parses an unsigned number from a string
Str_ParseNbr_Int32S() parses a signed number from a string

Version 1.25

V1.25-001

Added new memory allocation functions:

Mem_PoolCreate() create a memory pool

Mem_PoolBlkGet()get a memory block from a memory poolMem_PoolBlkFree()free a memory block back to a memory pool

See also 'Changes V1.26-001'.

V1.25-002

Added new ASCII module functions and macros:

ASCII_IsAlpha() ASCII_IS_ALPHA()	indicates whether a character is alphabetic
ASCII_IsAlnum() ASCII_IS_ALNUM()	indicates whether a character is alphanumeric (see also 'Changes V1.27-001')
ASCII_IsLower() ASCII_IS_LOWER()	indicates whether a character is lowercase
ASCII_IsUpper() ASCII_IS_UPPER()	indicates whether a character is uppercase
ASCII_IsDig() ASCII_IS_DIG()	indicates whether a character is a decimal digit
ASCII_IsDigHex() ASCII_IS_DIG_HEX()	indicates whether a character is a hexadecimal digit
ASCII_IsBlank() ASCII_IS_BLANK()	indicates whether a character is blank
ASCII_IsSpace() ASCII_IS_SPACE()	indicates whether a character is a space
ASCII_IsPrint() ASCII_IS_PRINT()	indicates whether a character is printable
ASCII_IsGraph() ASCII_IS_GRAPH()	indicates whether a character is graphic
ASCII_IsPunct() ASCII_IS_PUNCT()	indicates whether a character is punctuation
ASCII_IsCtrl() ASCII_IS_CTRL()	indicates whether a character is a control
ASCII_ToLower() ASCII_TO_LOWER()	converts uppercase to lowercase
ASCII_TOUpper() ASCII_TO_UPPER()	converts lowercase to uppercase

See also 'Changes V1.25-001'.

V1.24-001

Added new CPU-related integer defines:

```
DEF_INT_CPU_NBR_BITS

DEF_INT_CPU_MASK

DEF_INT_CPU_U_MIN_VAL

DEF_INT_CPU_U_MAX_VAL

DEF_INT_CPU_S_MIN_VAL

DEF_INT_CPU_S_MAX_VAL

DEF_INT_CPU_S_MIN_VAL_ONES_CPL

DEF_INT_CPU_S_MAX_VAL_ONES_CPL
```

Version 1.23

N/A

Version 1.22

N/A

Version 1.21

V1.21-001

Added new memory data value macros:

<pre>MEM_VAL_GET_???()</pre>	decode data values from any memory address
MEM_VAL_SET_???()	encode data values to any memory address
MEM_VAL_COPY_GET_???()	copy and decode data values from any memory address to any other memory address
MEM_VAL_COPY_SET_???()	copy and encode data values from any memory address to any other memory address
MEM_VAL_COPY_???()	copy data values from any memory address to any other memory address

See also 'New Features V1.35.00-004'.

V1.20-001

Added new string functions:

Str_Copy_N() copies a string limited to a maximum number of characters

Str_Cat_N() concatenates two strings limited to a maximum number of characters

Str_Char_N() searches a string for a character limited to a maximum number

of characters

See also 'New Features V1.26-003, V1.30-004, & V1.31-001'.

Version 1.19

N/A

Version 1.18

N/A

Improvements

Version 1.36.02

V1.36.02-001

Macros DEF_CHK_VAL(), DEF_CHK_VAL_MAX() and DEF_CHK_VAL_MIN() now supports explicitly unsigned numbers.

Version 1.36.01

V1.36.01-001

Updated µC/LIB's CERT-C and MISRA-C compliance:

V1.36.01-001a

Cast all ~ and << operands to appropriate integer data sizes (MISRA 2004 Rule 10.5).

V1.36.01-002

Refactored the following functions to validate arguments only if LIB MEM CFG ARG CHK EXT EN is enabled:

```
Mem_Set()
Mem Copy()
```

Version 1.36.00

V1.36.00-001

Updated µC/LIB's CERT-C and MISRA-C compliance:

V1.36.00-001a

Prefixed MEM_VAL_COPY_GET_INTU_xxx() and MEM_VAL_COPY() loop counter identifier names, i and j, with a single underscore to avoid possible redeclaration of commonly-used loop counter identifier names thereby preventing declaration of identifiers with the same name within overlapping code block scopes (MISRA 2004 Rule 5.2).

V1.36.00-002

Refactored Mem_PoolCreate() to improve inserting new memory pools into the memory pool table and provide support for new Mem_PoolGetSizeRem() functions (see 'New Features V1.36.00-001').

Version 1.35.00

V1.35.00-001

Updated μC/LIB's CERT-C and MISRA-C compliance:

V1.35.00-001a1

Added 'u' qualifier back to certain unsigned integer constants (MISRA 2004 Rule 10.6). This reverts the removal of all unsigned integer constants, requiring instead that unsigned constants used in signed expressions must be cast to appropriate signed data types. See also 'Improvements V1.34-001b & V1.31-001a1'.

V1.35.00-001a2

Removed 'L' qualifier from certain long integer constants. This reverts the return of certain long integer constants. See also 'Improvements V1.33-001b & V1.31-001a2'.

V1.35.00-001b

Modified DEF_BIT_IS_CLR() and DEF_BIT_IS_SET_ANY() to explicitly test masked values for zero (MISRA 2004 Rule 13.2). See also 'Changes V1.35.00-001b'.

V1.35.00-002

Modified MEM VAL SET xxx() to cast bit mask to appropriate integer data type size.

V1.35.00-003

Refactored Mem_PoolBlkFree() to validate memory block address before validating if the memory pool is full.

V1.35.00-004

Modified the following functions to invalidate len max for non-positive values:

```
Str_Cat_N()
Str_Cmp_N()
Str_CmpIgnoreCase_N()
Str_Char_N()
Str_Char_Last_N()
Str_Str_N()
```

V1.35.00-005

Modified Str_FmtNbr_Int32() to consistently compare decimal digit values for less than 10 versus less than or equal to 9.

Version 1.34

V1.34-001

Updated µC/LIB's CERT-C and MISRA-C compliance:

V1.34-001a

Removed the following standard library headers from being #include'd in lib_str.h:

```
<ctype.h>
<errno.h>
<limits.h>
<stdio.h>
<stdlib.h>
```

V1.34-001b

Removed 'u' qualifier from certain integer constants (MISRA 2004 Rule 10.6). This reverts a previously implemented improvement only for certain integer constants that may be used in both signed and unsigned expressions. See also 'Improvements V1.31-001a1'.

V1.34-001c

Added **const** modifier to all appropriate API function pointer arguments (MISRA 2004 Rule 16.7). See also 'Changes V1.34-001'.

V1.34-002

Modified the following functions to reconfigure any optional NULL return pointers to point to an unused local variable in order to remove NULL pointers from scope:

```
Mem_HeapAlloc()
Mem_PoolCreate()
Str_ParseNbr_Int32()
```

Version 1.33

V1.33-001

Updated µC/LIB's CERT-C and MISRA-C compliance:

V1.33-001a

Modified functions to trap NULL 'p_err' pointers with μ C/CPU's new CPU_SW_EXCEPTION() macro.

V1.33-001b

Added 'L' qualifier to certain long integer constants. This reverts a previously incorrect assumption about certain integer data type and constant promotions. See also 'Improvements V1.31-001a2'.

V1.33-001c

Removed Str_IsPrint() and Str_ToLong() standard library string macros.

V1.33-002

Modified Str Copy N() to allow copies of 0 size. See also 'Changes V1.33-002'.

V1.33-003

Modified Str_FmtNbr_32() to limit the maximum number of floating-point number significant digits to format. See also 'New Features V1.33-001'.

V1.33-004

Modified Str_FmtNbr_32() and Str_FmtNbr_Int32() to always prepend possible negative sign immediately prior to the formatted number's (nbr) most significant digit if lead character (lead_char) is not an alphanumerical digit; otherwise, prepends possible negative sign prior to any alphanumerical lead characters.

V1.33-005

Improved the following functions to check for heap or segment memory request overflows:

```
Mem_HeapAlloc()
Mem_PoolCreate()
Mem_PoolSegCalcTotSize()
Mem_PoolSegAlloc()
```

V1.33-006

Added 64-bit integer #define's in lib_def.h.

Version 1.32

V1.32-001

Updated µC/LIB's CERT-C and MISRA-C compliance:

V1.32-001a

Encapsulated all macros defined as code blocks within do..while(0) conditions (MISRA 2004 Rule 19.4).

V1.32-002

Removed Mem_PoolSegAlloc()'s critical sections since Mem_PoolSegAlloc() is always called with critical sections already acquired.

Version 1.31

V1.31-001

Updated $\mu\text{C/LIB}$'s CERT-C and MISRA-C compliance:

V1.31-001a1

Appended unsigned 'u' qualifier to all unsigned integer constants (MISRA 2004 Rule 10.6).

V1.31-001a2

Removed redundant 'L' qualifier from all long integer constants.

V1.31-001b

Replaced all instances of '???' comments with '&&&' (to avoid possible usage of C trigraphs) [MISRA 2004 Rule 4.2].

V1.31-001c

Refactored the following functions to copy any function arguments into local variables before modifying:

```
Mem_HeapAlloc()
Mem_PoolCreate()

Str_Len_N()
Str_Copy_N()
Str_Cat_N()
Str_Cmp_N()
Str_CmpIgnoreCase_N()
Str_Char_N()
```

V1.31-002

Improved the following string functions to call their corresponding length-limited functions:

```
Str_Char_Last() calls Str_Char_Last_N()
Str_Str() calls Str_Str_N()
```

See also 'New Features V1.31-002' & 'Improvements V1.26-001'.

V1.31-003

Improved the following functions to terminate, and return errors when possible, if any strings point or overlap with the NULL address (i.e. the terminating NULL character is not found prior to the string pointer overflowing to the NULL address):

```
Str_Copy_N()
Str_Cat_N()
Str_Char_N()
Str_Char_Last_N()
Str_Str_N()
```

See also 'Corrections V1.31-001'.

Version 1.30

V1.30-001

Improved the following bit macros to be called from within conditional expressions:

```
DEF_BIT_SET()
DEF_BIT_CLR()
```

Version 1.29

V1.29-001

Improved the configuration of optional memory allocation argument checking.

Version 1.28

V1.28-001

Replaced all 'cpu_sr' local variable declarations with \(\mu C/CPU'\) new CPU_SR_ALLOC() macro.

Version 1.27

N/A

Version 1.26

V1.26-001

Improved the following string functions to call their corresponding length-limited functions:

```
Str_Copy() calls Str_Copy_N()
Str_Cat() calls Str_Cat_N()
Str_Cmp() calls Str_Cmp_N()
```

```
Str_Char() calls Str_Char_N()
```

See also 'New Features V1.20-001' & 'Improvements V1.31-002'.

V1.26-002a

Improved unsigned integer macro definitions by explicitly declaring unsigned constant.

V1.26-002b

Improved signed integer macro definitions by avoiding twos-complement arithmetic underflow.

Version 1.25

N/A

Version 1.24

V1.24-001

Added LIB_VERSION to indicate current library module software version number.

V1.24-002

Improved several DEF BIT ???() macros to handle overflow boundary conditions.

V1.24-003

Added several LIB STR ??? common string defines.

Version 1.23

V1.23-001

Removed malloc() and all other references to standard library memory functions.

Version 1.22

N/A

Version 1.21

N/A

Version 1.20

V1.20-001

Improved ARM assembly port files to be compatible for both ARM and Thumb modes.

Version 1.19

N/A

V1.18-001

Added macro function headers for all lib_def.h macros.

V1.18-002

Improved consistency for all lib_str.c functions.

Changes

Version 1.36.02

N/A

Version 1.36.01

V1.36.01-001

Renamed Mem PoolGetSizeRem() to Mem SegGetSizeRem():

Mem SegGetSizeRem()

gets memory pool's remaining segment size available to allocate

(in number of available octets)

See also 'New Features V1.36.01-001'.

V1.36.01-002

Added MEM POOL BLK QTY data type.

V1.36.01-003

Modified Mem PoolCreate()'s blk nbr data type from CPU SIZE T to MEM POOL BLK QTY:

```
void Mem_PoolCreate(MEM_POOL
                                        *pmem_pool,
                     void
                                        *pmem base addr,
                                         mem size,
                      CPU SIZE T
                     MEM_POOL_BLK_QTY
                                         blk_nbr,
                     CPU SIZE T
                                         blk size,
                     CPU SIZE T
                                         blk align,
                      CPU_SIZE_T
                                        *poctets_reqd,
                     LIB ERR
                                        *perr);
```

V1.36.01-004

Modified DEF_BIT_SET() and DEF_BIT_CLR() to call appropriate sized DEF_BIT_SET_xx() and DEF_BIT_CLR_xx(), respectively, in order to appropriately cast val and mask operands. See also 'New Features V1.36.01-002' & 'Improvements V1.36.01-001a'.

Version 1.36.00

N/A

Version 1.35.00

V1.35.00-001a

Modified DEF_BIT_IS_SET() and DEF_BIT_IS_CLR() to return DEF_NO for NULL masks (i.e., masks of value 0).

V1.35.00-001b

Modified DEF_BIT_IS_CLR(), DEF_BIT_IS_SET_ANY(), and DEF_BIT_IS_CLR_ANY() to test masked values with equality (instead of inequality) to zero or specified mask. See also 'Improvements V1.35.00-001b'.

Version 1.34

V1.34-001

Modified the following functions to add the const modifier to all appropriate pointer arguments:

```
Mem Copy()
Mem_Cmp()
Str Len()
Str_Len_N()
Str Copy()
Str_Copy_N()
Str Cat()
Str_Cat_N()
Str Cmp()
Str Cmp N()
Str CmpIgnoreCase()
Str_CmpIgnoreCase_N()
Str Char()
Str Char N()
Str Char Last()
Str Char Last N()
Str Str()
Str Str N()
Str ParseNbr Int32U()
Str_ParseNbr_Int32S()
```

V1.34-002

Modified Mem_HeapAlloc() and Mem_PoolCreate() to invalidate 0 (zero) as a valid value for arguments align and blk_align, respectively, which defaults to no alignment. Only a positive number of octets that specify the word boundary alignment are validated.

V1.34-003a

Modified the following functions to format an invalid string for any invalid arguments, error conditions, or if the number to format (nbr) has more significant integer digits than the number of digits to format (nbr_dig):

```
Str_FmtNbr_Int32U()
Str_FmtNbr_Int32S()
Str_FmtNbr_32()
```

The invalid string is formatted with nbr dig and nbr dp number of question marks ('?').

V1.34-003b

Whenever an invalid string is formatted for any reason, string format functions also return a NULL pointer.

V1.34-004

Modified the following functions to invalidate any lead character (lead_char) that is a valid number digit with the exception of zero ('0'):

```
Str_FmtNbr_Int32U()
Str_FmtNbr_Int32S()
Str_FmtNbr_32()
```

Version 1.33

V1.33-001

Modified Mem_PoolBlkGet() to invalidate memory requests of 0 size.

V1.33-002

Modified Str_Copy_N() to allow copies of 0 size. See also 'Improvements V1.33-002'.

Version 1.32

N/A

Version 1.31

N/A

Version 1.30

V1.30-001

Replaced assembly-optimized configuration from generic uC_CFG_OPTIMIZE_ASM_EN to library-specific LIB_MEM_CFG_OPTIMIZE_ASM_EN. See also 'New Features V1.30-002'.

Version 1.29

N/A

Version 1.28

N/A

V1.27-001

Renamed the following lib_ascii.h macros and functions:

```
ASCII_IsAlnum() renamed to ASCII_IsAlphaNum()
ASCII IS ALNUM() renamed to ASCII IS ALPHA NUM()
```

V1.27-002

Modified Str_FmtNbr_???() leading character parameter from a Boolean (lead_zeros) that specified whether leading zeros were prepended to the formatted number string when necessary, to the desired ASCII character (lead char) to prepend to the formatted number string:

```
CPU CHAR *Str FmtNbr Int32U(CPU INT32U
                                              nbr,
                              CPU INT08U
                                              nbr dig,
                              CPU INT08U
                                              nbr base,
                              CPU_CHAR
                                              lead_char,
                                              lower case,
                              CPU BOOLEAN
                              CPU BOOLEAN
                                              nul,
                              CPU_CHAR
                                             *pstr);
CPU CHAR
          *Str FmtNbr Int32S(CPU INT32S
                                              nbr,
                              CPU INT08U
                                              nbr dig,
                              CPU INT08U
                                              nbr base,
                              CPU CHAR
                                              lead char,
                              CPU_BOOLEAN
                                              lower_case,
                              CPU BOOLEAN
                                             nul,
                              CPU CHAR
                                             *pstr);
CPU CHAR *Str FmtNbr 32
                             (CPU FP32
                                              nbr,
                              CPU INT08U
                                              nbr dig,
                              CPU INT08U
                                              nbr_dp,
                                              lead char,
                              CPU CHAR
                              CPU BOOLEAN
                                              nul,
                              CPU CHAR
                                             *pstr);
```

Version 1.26

V1.26-001

Changed memory pool configuration to memory allocation configuration — LIB_MEM_CFG_POOL_EN to LIB MEM CFG ALLOC EN.

V1.26-002

Changed the following lib_mem.h error codes:

LIB MEM ERR INVALID ADDR changed to LIB MEM ERR INVALID BLK ADDR

V1.26-003

Changed the following lib_def.h macro constants:

```
DEF_INACTIVE redefined to 0
DEF_ACTIVE redefined to 1
```

Version 1.25

V1.25-001

The following macros in lib_str.h have been deprecated and replaced with new macros and functions in lib_ascii.h:

```
replaced with ASCII_IsAlpha() / _IS_ALPHA()
Str_IsAlpha()
                replaced with ASCII_IsDig() / _IS_DIG()
Str_IsDigit()
                replaced with ASCII IsSpace() / IS SPACE()
Str IsSpace()
                replaced with ASCII_IsPrint() / _IS_PRINT()
Str_IsPrint()
                replaced with ASCII_IsUpper() / _IS_UPPER()
Str_IsUpper()
                replaced with ASCII IsLower() / IS LOWER()
Str IsLower()
                replaced with ASCII_ToUpper() / _TO_UPPER()
Str ToUpper()
                replaced with ASCII_ToLower() / _TO_LOWER()
Str_ToLower()
```

See also 'New Features V1.25-002'.

Version 1.24

N/A

Version 1.23

N/A

Version 1.22

N/A

Version 1.21

N/A

V1.20-001

The following macro names in lib_str.h have been changed to comply with standard naming conventions:

```
Is Alpha()
             changed to Str IsAlpha()
             changed to Str IsDigit()
Is Digit()
             changed to Str IsSpace()
Is Space()
             changed to Str IsPrint()
Is Print()
             changed to Str IsUpper()
Is Upper()
Is_Lower()
             changed to Str_IsLower()
To_Upper()
             changed to Str_ToUpper()
To_Lower()
             changed to Str_ToLower()
Str_To_Long()
                      changed to Str ToLong()
                      changed to Str_FmtPrint()
Str_Format_Print()
                      changed to Str FmtScan()
Str Format Scan()
```

Version 1.19

V1.19-001

Macros Str_Format_Print() and Str_Format_Scan() in lib_str.h have been corrected to be compatible with some compilers.

Version 1.18

V1.18-001

DEF_BIT_MASK() macro and DEF_BIT_FIELD() macro switched names.

V1.18-002

Renamed Str_Char_R() to Str_Char_Last().

Corrections

Version 1.36.02

N/A

Version 1.36.01

V1.36.01-001

MEM_POOL_IX data type incorrectly defined as a CPU_INT16U type. However, MEM_POOL_IX variables initialized by CPU_SIZE_T arguments. Fixed by defining MEM_POOL_IX as new MEM_POOL_BLK_QTY type. See also 'Changes V1.36.01-002'.

Version 1.36.00

N/A

Version 1.35.00

N/A

Version 1.34

N/A

Version 1.33

V1.33-001

Str_Char_N() incorrectly returned a pointer to the search character even if its first occurrence was (len_max + 1) characters into the search string. Fixed by always returning a pointer to NULL string if the search character is not found in the search string within the first len_max characters.

Version 1.32

N/A

Version 1.31

V1.31-001

Refactored the following functions to fully comply with their standard library equivalents (see also 'Improvements V1.31-003'):

V1.31-001a

Str_Copy_N() incorrectly always appended a terminating NULL character to the destination string, regardless of the specified maximum number of characters to copy. Fixed by only copying the source string's terminating NULL character if available within the specified maximum number of characters to copy.

V1.31-001b

Str_Str_N() incorrectly returned a pointer to the string's terminating NULL character if the search string was a zero-length NULL string. Fixed by returning a pointer to the string if the search string is a zero-length NULL string.

Version 1.30

N/A

Version 1.29

N/A

Version 1.28

N/A

Version 1.27

V1.27-001

Str_ParseNbr_Int32() failed to always set negative sign (neg) during validation. Fixed by always setting neg for all conditions.

Version 1.26

V1.26-001

Mem_PoolCreate() incorrectly calculated the number of additional octets required to successfully allocate all requested memory (returned by p_octets_reqd) for certain fault conditions. Fixed by calculating and returning the actual additional octets required to successfully allocate all requested memory for all error/fault conditions.

Version 1.25

N/A

Version 1.24

N/A

V1.23-001

ARM assembly port files were not completely compatible for both ARM and Thumb modes (see 'Improvements V1.20-001'). Corrected by using only ARM and Thumb mode instructions.

Version 1.22

N/A

Version 1.21

N/A

Version 1.20

N/A

Version 1.19

N/A

Version 1.18

V1.18-001

Str_Str() incorrectly assigned unsigned string lengths to signed variables. Corrected by assigning string lengths to unsigned variables.

V1.18-002

lib_mem_a.asm did not correctly terminate the memory copy during the Pre_Copy_1 label if no more data octets to copy. Corrected by terminating the memory copy if no more data octets.

V1.18-001a (Unresolved)

V1.18-001b (Unresolved)

Version 1.18

V1.18-001a

lib_mem.h includes some standard library files and functions. All references to standard library files and functions should be removed once all custom library functions are implemented.

V1.18-001b

lib_str.h includes some standard library files and functions. All references to standard library files and functions should be removed once all custom library functions are implemented.

Limitations

001

Does not support variable argument library functions
